

GeoSpectrum Technologies Inc
Customizing Detection

Towed Sound Sources

Towed Sound Sources

GeoSpectrum Technologies provides an array of towed sound sources to suit your application, from individual components to turn-key systems comprised of towbody, sound source and handling system.

Compact Towed Source & Echo Repeater

Portable Towed Directional Sensor

GeoSpectrum Technologies Inc has been manufacturing world-class sound source transducers for over 20 years.

These same products are also available in a variety of towed source packages, bringing you closer to your end goal without having to piece together the equipment you need from a variety of places.

These towed packages range from single sources with all the required brackets and connectors included, to towed bodies equipped to carry the sound sources of your choice, to full turn-key systems that include the sound sources, the vehicle to deploy them on, and the launch and recovery system (LARS) required to get your equipment in and out of the water with the highest margin of safety and the least cost.

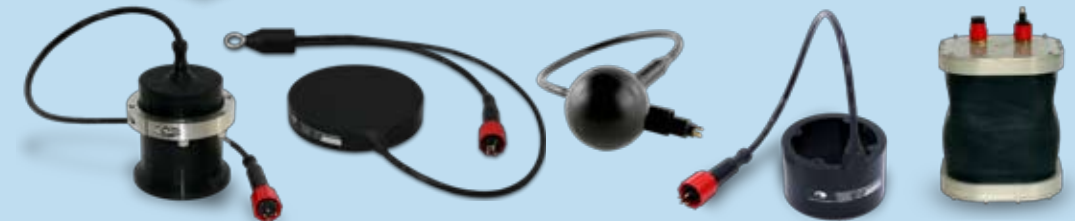

Some systems can be re-configured for static deployments, expanding their operational envelopes.

GeoSpectrum supplies proprietary hardware and software to complement the specialized hardware.

Rely on GeoSpectrum Technologies for accurate customized detection.

Power Supply & Signal Conditioner

Sound Source Types:

- Tonpilz
- Benders
- Spheres
- Free Flooding Rings
- Modular Projector System (MPS)
